

Self Assessment

Java: 4
OOPs: 3
SQL: 2
HTML/CSS/JScript: 1
React: 3
Angular: ?
Git: 2
Communication :3

Weakest Area: SQL, Html CSS and JavaScript, Git

Weakest area explained.

I've only interacted with SQL and databases briefly even on my self projects. Once the system is set up correctly I no longer interact with it as much. This is somewhat true for github as well. In github I mostly use fetch, pull, add, commit, push. But setting it up is something I google every time.

Html CSS and JavaScript are things I'm not too familiar with. I've learned it once and haven't touched it much. I've used it briefly when making a project with React.
